L2 is the most basic level. It uses **Mustache syntax ({{ }})** to display data such as product and description. This level helps you understand how Vue creates an app instance and renders data to the DOM.

L3 focuses on **attribute binding**, specifically binding a url variable from the data() object to an anchor tag. When clicking “More details,” the link opens in a new tab. There is no conditional rendering yet, so the “On Sale” text does not appear.

In L4, the interface is the most complete. It displays the product name *Socks*, an image, a description, an **“On Sale”** label, and a **“More details”** link. This level demonstrates:

- v-bind for dynamic attributes such as the image source (:src="image")
- v-if="onSale" to conditionally render the “On Sale” message
- Binding a URL using :href="url"
  L4 combines the concepts from both L3 and L4 challenges into a single Vue app.
-

Overall, the three levels show a clear learning progression: **data rendering → attribute binding → conditional rendering**, and separating them into folders makes the project organized and easy to submit to GitHub Classroom.
